

# FOLLOW IT THROUGH

Aluminum is produced in each of these reduction cells. There are 600 of these cells in the plant's ten potrooms.

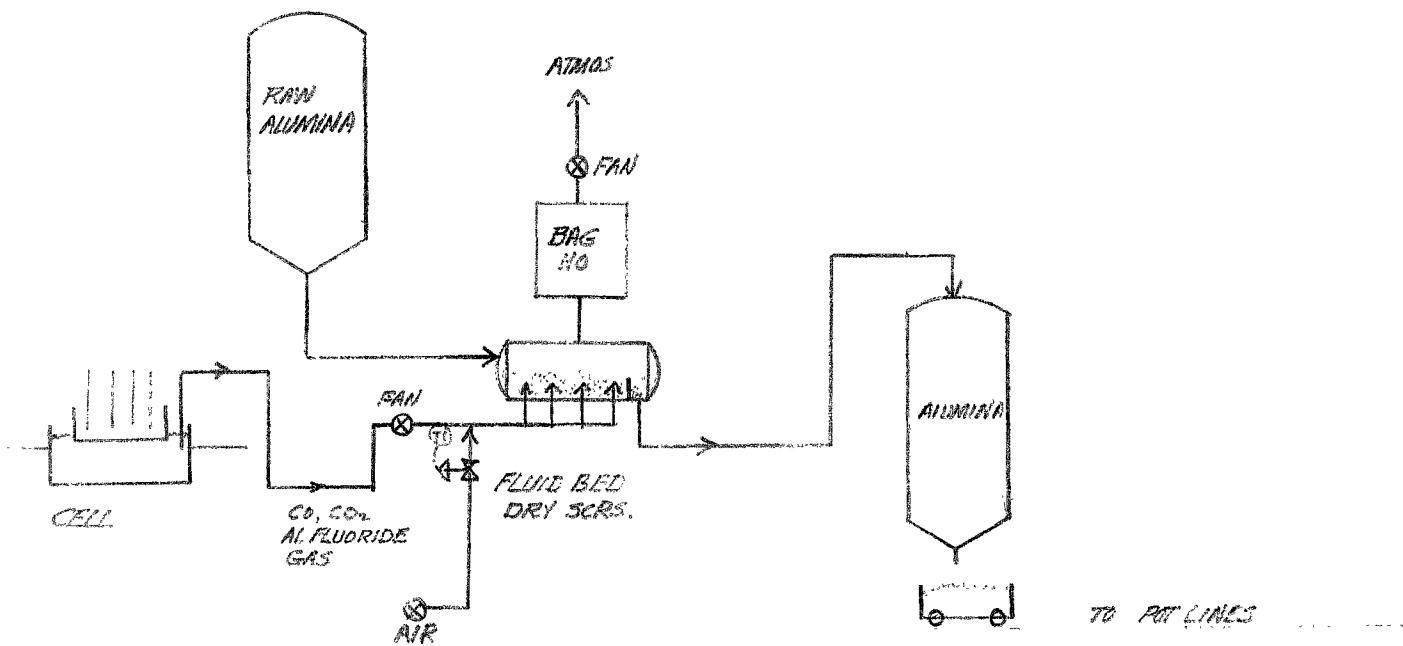

The alumina is charged to the individual reduction cells by this ore charging truck.

As the oxygen burns off, molten aluminum settles to the bottom of the cathode and is siphoned from the cell . . .

. . . poured into a crucible for transport to the Casting Plant . . .

## 2 SCRUBBER SYSTEMS

SET OF 6 FLUID BED DRY SCRUBBERS ON EAST SIDE - LINES 3, 4, 5

SET OF 4 " " " " WEST " - LINES 1, 2
